109 0.9s	110 1.4s	111 0.4s	112 0.4s	113 0.6s	114 0.4s	115 0.4s					

Read left to right, then down. Cell numbers match the chart sections; -- means timing unavailable.

Each cell is one chart; both grids follow chart-section order. Click a cell in the PDF for details. Colors show the highest observed finding kind, not a security or business-impact score. Hatching marks unfinished or unavailable testing, even when a finding was recorded. No findings means none in the completed sample, not exhaustive coverage. Testing time excludes dependency preparation.

Scan summary

Git comparison unavailable; no charts skipped using previous test results.

Directory: /Users/emmadoyle/projects/personal/hypothesis-helm/third_party/bitnami-charts

Finished (UTC): 2026-09-21T20:58:10.038+00:00
Run fingerprint (SHA-256): 07cdade5dc97c59ccee41b82b9f9e77d6dd466cf850568346970ae063cdc4fe2
Elapsed (wall clock): 1035.22 seconds
Chart testing: 112.22 seconds
Dependency preparation: 910.26 seconds (excluded from testing budgets)
Charts discovered: 115
Scan status: completed
Discovery complete: True
Unstarted charts: 0

Results record outcomes for the tested sample and selected checks.

Baseline-only, skipped, blocked, and incomplete charts retain their respective statuses.

Status counts

114 unsupported-schema; 1 skipped-library.

Settings

Filtering: True | Seed: 0 | Traversal: sensitivity-first
Chart timeout: 300.0 seconds | Workers: not recorded
Complete settings are retained in the JSON report.

Generated values use the configured input domains and any supported destination constraints.
Coverage excludes inputs outside these domains; supplied defaults are tested unchanged. The JSON report records constraints and unresolved mappings.

Disabled checks: [HH2006](#)

Errors

1 distinct diagnostics across 114 occurrences; 113 repeats grouped.
Diagnostics and their triggering inputs are grouped under each chart below.
Up to two examples per diagnostic and six fields per example are shown. Long values and diagnostics are shortened.
Full inputs, diagnostics, and remaining cases are retained in local run data.
Selected fields identify the inputs varied by the test. Causal attribution requires further investigation.

Appendix: finding codes

HH codes identify finding categories. E001-style numbers identify individual diagnostics within this report.

Severities below are defaults; configured overrides are shown with the findings above.

HH2001 - Undocumented values path

Default severity: warning | Category: values | Evidence type: warning

The audit finds a values path with no matching schema declaration.

Suggested action: Document the path in values.schema.json, including its accepted values.

HH2002 - Unspecified values type

Default severity: warning | Category: values | Evidence type: warning

A schema path declares no type, enum or const.

Suggested action: Declare the accepted type or a finite set of values.

HH2003 - Missing values description

Default severity: info | Category: values | Evidence type: warning

A typed schema path has no description.

Suggested action: Describe the field's behavior and any requirements shared with other fields.

HH2004 - No supplied default for a values path

Default severity: warning | Category: values | Evidence type: warning

A discovered path is absent from the original values file.

Suggested action: Supply a default or document when users must provide the field. Render the relevant configurations to check its requirements.

HH2006 - Opaque object schema

Default severity: warning | Category: values | Evidence type: warning

An object permits unspecified entries without named fields, patterned fields or a typed map-value schema.

Suggested action: Describe fields with properties, patternProperties or typed additionalProperties. Ignore [HH2006](#) for intentional free-form configuration; tests still sample those values.
