Overview

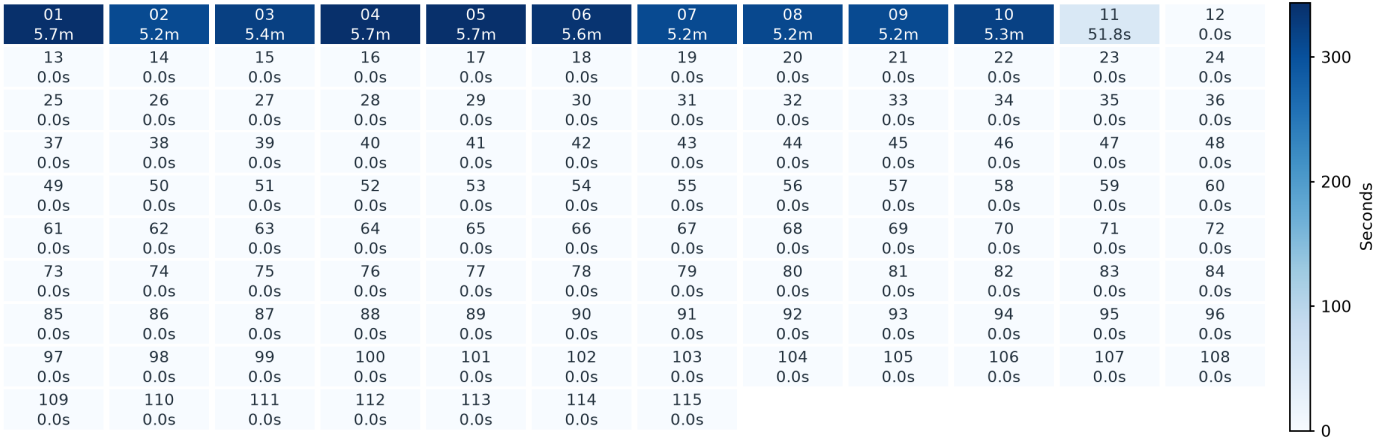

Findings by chart

Which charts have violations, warnings, or unresolved diagnostics?

Testing time by chart

Which charts used the most time? Cells match the chart grid above.

Read left to right, then down. Cell numbers match the chart sections; -- means timing unavailable.

Each cell is one chart; both grids follow chart-section order. Click a cell in the PDF for details. Colors show the highest observed finding kind, not a security or business-impact score. Hatching marks unfinished or unavailable testing, even when a finding was recorded. No findings means none in the completed sample, not exhaustive coverage. Testing time excludes dependency preparation.

Scan summary

Git comparison unavailable; no charts skipped using previous test results.

Directory: /Users/emmad Doyle/projects/personal/hypothesis-helm/third_party/bitnami-charts

Started (Unix epoch): 1789959424

Started (UTC): 2026-09-21T02:57:04.000+00:00

Finished (UTC): 2026-09-21T03:53:35.253+00:00

Run fingerprint (SHA-256): f4ff5b809c922f7de0763582ba899a95883c56c2b5d6850ed1f435f7cf2dd927

Elapsed (wall clock): 3390.34 seconds

Chart testing: 3302.63 seconds

Dependency preparation: 85.70 seconds (excluded from testing budgets)

Charts discovered: 115

Scan status: interrupted

Discovery complete: True

Unstarted charts: 104

Results record outcomes for the tested sample and selected checks.

Baseline-only, skipped, blocked, and incomplete charts retain their respective statuses.

Status counts

8 time-limit; 2 failed; 1 interrupted; 104 pending.

Settings

Filtering: True | Seed: 0 | Traversal: random

Chart timeout: 300.0 seconds | Workers: not recorded

Complete settings are retained in the JSON report.

Generated values use the configured input domains and any supported destination constraints.

Coverage excludes inputs outside these domains; supplied defaults are tested unchanged. The JSON report records constraints and unresolved mappings.

Disabled checks: [HH2006](#)

Errors

14 distinct diagnostics across 14 occurrences; 0 repeats grouped.

Diagnostics and their triggering inputs are grouped under each chart below.

Up to two examples per diagnostic and six fields per example are shown. Long values and diagnostics are shortened.

Full inputs, diagnostics, and remaining cases are retained in local run data.

Selected fields identify the inputs varied by the test. Causal attribution requires further investigation.

Appendix: finding codes

HH codes identify finding categories. E001-style numbers identify individual diagnostics within this report.

Severities below are defaults; configured overrides are shown with the findings above.

HH1101 - Invalid YAML in rendered output

Default severity: error | Category: manifest | Evidence type: violation

The YAML parser rejects rendered output, or Helm reports a YAML parse error.

Suggested action: Inspect the failing YAML and template interpolation, including quoting and indentation.

HH2001 - Undocumented values path

Default severity: warning | Category: values | Evidence type: warning

The audit finds a values path with no matching schema declaration.

Suggested action: Document the path in values.schema.json, including its accepted values.

HH2002 - Unspecified values type

Default severity: warning | Category: values | Evidence type: warning

A schema path declares no type, enum or const.

Suggested action: Declare the accepted type or a finite set of values.

HH2003 - Missing values description

Default severity: info | Category: values | Evidence type: warning

A typed schema path has no description.

Suggested action: Describe the field's behavior and any requirements shared with other fields.

HH2004 - No supplied default for a values path

Default severity: warning | Category: values | Evidence type: warning

A discovered path is absent from the original values file.

Suggested action: Supply a default or document when users must provide the field. Render the relevant configurations to check its requirements.

HH2006 - Opaque object schema

Default severity: warning | Category: values | Evidence type: warning

An object permits unspecified entries without named fields, patterned fields or a typed map-value schema.

Suggested action: Describe fields with properties, patternProperties or typed additionalProperties. Ignore [HH2006](#) for intentional free-form configuration; tests still sample those values.
