Source commit

[6a8cccf3c29a1faabf0c34c8276a09ed14f3c5b3](https://github.com/bitnami/charts/commit/6a8cccf3c29a1faabf0c34c8276a09ed14f3c5b3)

Versions

Hypothesis 6.168.0; hypothesis-helm 0.1.0

Working directory

```
/Users/emmad Doyle/projects/personal/hypothesis-helm
```

Scan command

```
hypothesis-helm test third_party/bitnami-charts --jobs 8 --chart-timeout 10m  
--max-examples 10 --seed 0 --no-cache --shard none --artifact-dir  
docs/reports/bitnami-runs --report docs/reports/bitnami.md --log-color
```

Scan summary

Git comparison unavailable; no charts skipped using previous test results.

Directory: /Users/emmad Doyle/projects/personal/hypothesis-helm/third_party/bitnami-charts

Started (Unix epoch): 1790110299

Started (UTC): 2026-09-22T20:51:39.000+00:00

Finished (UTC): 2026-09-22T23:19:33.212+00:00

Run fingerprint (SHA-256): 3fa4986ed7ad35f1fa25a63fe97910d28beab8d7c02af46f26a1342764e15ac4

Versions: Hypothesis 6.168.0; hypothesis-helm 0.1.0

Elapsed (wall clock): 8873.74 seconds

Chart testing: 8754.11 seconds

Dependency preparation: 116.73 seconds (excluded from testing budgets)

Charts discovered: 115

Manifest test attempts: 520

Scan status: interrupted

Discovery complete: True

Unstarted charts: 100

Results record outcomes for the tested sample and selected checks.

Baseline-only, skipped, blocked, and incomplete charts retain their respective statuses.

Status counts

12 time-limit; 2 failed; 1 interrupted; 100 pending.

Settings

Filtering: False | Seed: 0 | Traversal: random

Chart timeout: 600.0 seconds | Workers: 8

Complete settings are retained in the JSON report.

Command working directory: /Users/emmad Doyle/projects/personal/hypothesis-helm

Scan command:

```
hypothesis-helm test third_party/bitnami-charts --jobs 8 --chart-timeout 10m --max-examples 10 --seed 0
--no-cache --shard none --artifact-dir docs/reports/bitnami-runs --report docs/reports/bitnami.md --log-color
```

Generated values use the configured input domains and any supported destination constraints. Coverage excludes inputs outside these domains; supplied defaults are tested unchanged. The JSON report records constraints and unresolved mappings.

Disabled checks: [HH2006](#)

Errors

8 distinct diagnostics across 8 occurrences; 0 repeats grouped.

Diagnostics and their triggering inputs are grouped under each chart below.

Up to two examples per diagnostic, with six fields each. Long values are shortened; YAML parser details stay in run data.

Full inputs, diagnostics, and remaining cases are retained in local run data.

Selected fields identify the inputs varied by the test. Causal attribution requires further investigation.

Charts

Appendix: graph structure

Compiler graph structure: 115 of 115 report charts

Graph size

Graph connectivity

[Published compiler graph invariants](#)

Published graph measurements are available for 115 of 115 report charts. Each point represents one chart. Plot guide: [Graph structure metrics](#).

Appendix: output space

[Output-space PCA before and after selection](#)

Bounded reference: 237 outputs from 4 of 115 charts; 237 retained. Both panels share one PCA fit. Plot guide: [Output-space PCA](#).

Appendix: plot guide

Overview matrices

Each numbered cell links to one chart. The left matrix shows findings or test status; the right shows recorded testing time. A dash means no timing was recorded. Incomplete and untested charts have not passed.

Chart topology

Vertices represent values paths, branch conditions, templates and manifest fields. Connections show the relationships the compiler could establish between them. Rendered fields, when available, describe the measured baseline. An absent connection does not prove independence when analysis is incomplete.

Field interactions

Both axes use the field numbers in the chart's sensitivity appendix entry, linked from its plot caption. Each measured cell compares changing two fields together with changing each separately from the same baseline. Manifests are encoded as path-and-value indicators, including empty containers. The color measures the sum of absolute differences in $f(ij) - f(i) - f(j) + f(0)$. A larger value means a stronger interaction for those particular changes; zero means no interaction was measured. Blank cells are unmeasured, not zero. These measurements describe sampled changes, not all possible field values or bug counts.

Graph structure metrics

Each point represents one chart with published graph measurements. The upper panel compares vertices with connections. The lower counts independent loops after ignoring connection direction: connections minus vertices plus disconnected groups. Parallel connections count separately. The axes compress large values while retaining zero. These counts describe graph structure, not execution loops, runtime or the number of defects.

Output-space PCA

The panels pool bounded reference measurements from the charts in this report. Colors identify chart numbers in the key below. Both panels use one PCA fit and identical axis limits; axis percentages show variance retained in the encoded features. Resource identities, structure and typed field values enter 256 signed hash bins; numeric values use a signed log transform, and bins are standardized before PCA. Hash collisions and projection can overlap distinct manifests. One observation represents one measured configuration, including repeated outputs. References use schema-valid Boolean flips, adjacent integers and joint changes from the supplied baseline; they do not enumerate the full input or output space. Path scans use recorded retained properties. Finite trimming selectors are replayed on the bounded reference, so their sampling floors apply to that reference size. Runtime rejection, equivalence reuse and failure expansion are not reconstructed. Failed renders have no coordinate. Missing or unfinished measurements do not imply zero variation. With no trimming, the two panels show the same reference sample.

Appendix: finding codes

HH codes identify finding categories. Numbered E entries, when present, identify recorded diagnostics. Severities below are defaults; configured overrides are shown with the findings above.

HH1101 - Invalid YAML in rendered output

Default severity: **error** | Category: manifest | Evidence type: violation

The YAML parser rejects rendered output, or Helm reports a YAML parse error.

Suggested action: Inspect the failing YAML and template interpolation, including quoting and indentation.

HH1109 - Invalid manifest field type

Default severity: **error** | Category: manifest | Evidence type: violation

Helm parses the YAML but cannot decode a field into its required manifest type.

Suggested action: Check the field named in Helm's decoding error and constrain its values to the required type.

HH2001 - Undocumented values path

Default severity: **warning** | Category: values | Evidence type: warning

The audit finds a values path with no matching schema declaration.

Suggested action: Document the path in values.schema.json, including its accepted values.

HH2002 - Unspecified values type

Default severity: **warning** | Category: values | Evidence type: warning

A schema path declares no type, enum or const.

Suggested action: Declare the accepted type or a finite set of values.

HH2003 - Missing values description

Default severity: **info** | Category: values | Evidence type: warning

A typed schema path has no description.

Suggested action: Describe the field's behavior and any requirements shared with other fields.

HH2004 - No supplied default for a values path

Default severity: **warning** | Category: values | Evidence type: warning

A discovered path is absent from the original values file.

Suggested action: Supply a default or document when users must provide the field. Render the relevant configurations to check its requirements.

HH2006 - Opaque object schema

Default severity: **warning** | Category: values | Evidence type: warning

An object permits unspecified entries without named fields, patterned fields or a typed map-value schema.

Suggested action: Describe fields with properties, patternProperties or typed additionalProperties. Ignore [HH2006](#) for intentional free-form configuration; tests still sample those values.

HH3001 - Template accesses a missing object

Default severity: **error** | Category: template | Evidence type: violation

Helm reports a nil pointer while evaluating a template field.

Suggested action: Guard or default the parent object, or require it in the values schema.
