Click a section to jump to it. The PDF bookmarks also link to individual charts and diagnostics.

Overview

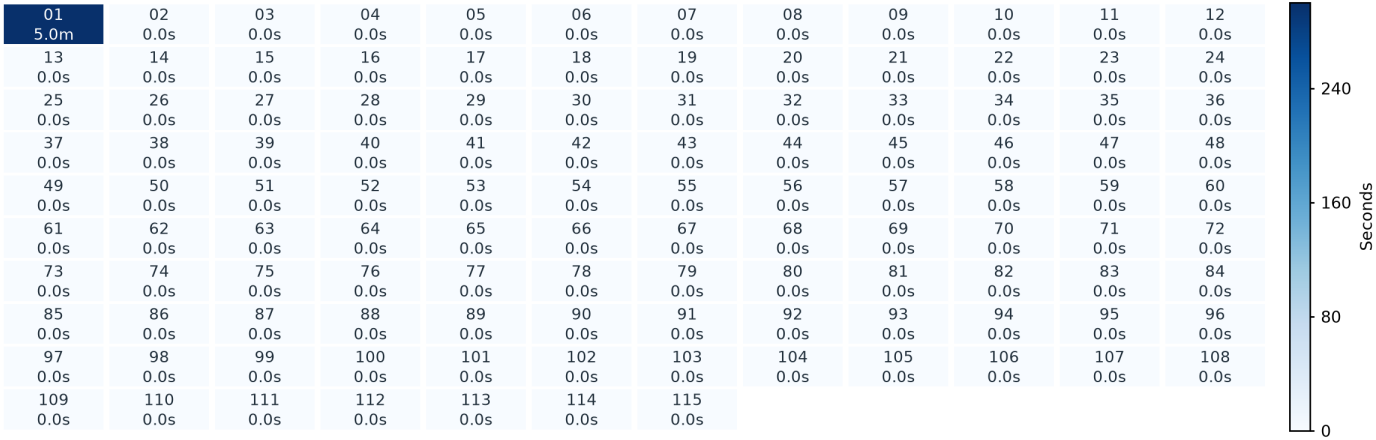

Findings by chart

Which charts have violations, warnings, or unresolved diagnostics?

Testing time by chart

Which charts used the most time? Cells match the chart grid above.

Read left to right, then down. Cell numbers match the chart sections; -- means timing unavailable.

Each cell is one chart; both grids follow chart-section order. Click a cell in the PDF for details. Colors show the highest observed finding kind, not a security or business-impact score. Hatching marks unfinished or unavailable testing, even when a finding was recorded. No findings means none in the completed sample, not exhaustive coverage. Testing time excludes dependency preparation.

Scan summary

Git comparison unavailable; no charts skipped using previous test results.

Directory: /Users/emmadoyle/projects/personal/hypothesis-helm/third_party/bitnami-charts

Started (Unix epoch): 1789968549

Started (UTC): 2026-09-21T05:29:09.000+00:00

Finished (UTC): 2026-09-21T05:34:17.633+00:00

Run fingerprint (SHA-256): 3a94b8c3a4c3548dee7ba8361b6095fe86608d8075b0a9e6a7920b0aff2eeefb

Elapsed (wall clock): 308.46 seconds

Chart testing: 299.98 seconds

Dependency preparation: 7.69 seconds (excluded from testing budgets)

Charts discovered: 115

Scan status: interrupted

Discovery complete: True

Unstarted charts: 114

Results record outcomes for the tested sample and selected checks.

Baseline-only, skipped, blocked, and incomplete charts retain their respective statuses.

Status counts

1 interrupted; 114 pending.

Settings

Filtering: True | Seed: 0 | Traversal: random

Chart timeout: 300.0 seconds | Workers: not recorded

Complete settings are retained in the JSON report.

Generated values use the configured input domains and any supported destination constraints.

Coverage excludes inputs outside these domains; supplied defaults are tested unchanged. The JSON report records constraints and unresolved mappings.

Disabled checks: [HH2006](#)

Appendix: finding codes

HH codes identify finding categories. E001-style numbers identify individual diagnostics within this report.

Severities below are defaults; configured overrides are shown with the findings above.

HH2001 - Undocumented values path

Default severity: warning | Category: values | Evidence type: warning

The audit finds a values path with no matching schema declaration.

Suggested action: Document the path in values.schema.json, including its accepted values.

HH2006 - Opaque object schema

Default severity: warning | Category: values | Evidence type: warning

An object permits unspecified entries without named fields, patterned fields or a typed map-value schema.

Suggested action: Describe fields with properties, patternProperties or typed additionalProperties. Ignore [HH2006](#) for intentional free-form configuration; tests still sample those values.
