- Violation
- Diagnostic
- Incomplete
- Testing unfinished / unavailable
- Warning
- No findings
- Not tested

Testing time by chart

Which charts used the most time? Cells match the chart grid above.

Read left to right, then down. Cell numbers match the chart sections; -- means timing unavailable.

Each cell is one chart; both grids follow chart-section order. Click a cell in the PDF for details. Colors show the highest observed finding kind, not a security or business-impact score. Hatching marks unfinished or unavailable testing, even when a finding was recorded. No findings means none in the completed sample, not exhaustive coverage. Testing time excludes dependency preparation.

Scan summary

Git comparison: HEAD^ (b2c38cff79e9f432a6194223beb1b172e8b7667f); 0 cached chart successes reused.
Directory: /Users/emmad Doyle/projects/personal/hypothesis-helm/third_party/prometheus-community-helm-charts
Started (Unix epoch): 1789747367
Started (UTC): 2026-09-18T16:02:47.000+00:00
Finished (UTC): 2026-09-18T16:02:48.774+00:00 (estimated from recorded timing)
Run fingerprint (SHA-256): 354ef379ee03ce68d434adca84c81694734ebd7b69d2f6e9e404b3daf8069b3e
Elapsed (wall clock): 1.77 seconds
Chart testing: 1.38 seconds
Dependency preparation: 0.14 seconds (excluded from testing budgets)
Charts discovered: 46
Scan status: interrupted
Discovery complete: True
Unstarted charts: 44

Results record outcomes for the tested sample and selected checks.
Baseline-only, skipped, blocked, and incomplete charts retain their respective statuses.

Status counts

1 error; 1 interrupted; 44 pending.

Settings

Filtering: True | Seed: 0 | Traversal: random
Chart timeout: 300.0 seconds | Workers: not recorded
Complete settings are retained in the JSON report.

Generated values use the configured input domains and any supported destination constraints.
Coverage excludes inputs outside these domains;
supplied defaults are tested unchanged. The JSON report records constraints and unresolved mappings.

Disabled checks: [HH2006](#)

Errors

2 distinct diagnostics across 2 occurrences; 0 repeats grouped.
Diagnostics and their triggering inputs are grouped under each chart below.
Up to two examples per diagnostic and six fields per example are shown. Long values and diagnostics are shortened.
Full inputs, diagnostics, and remaining cases are retained in local run data.
Selected fields identify the inputs varied by the test. Causal attribution requires further investigation.

Appendix: finding codes

HH codes identify finding categories. E001-style numbers identify individual diagnostics within this report.

Severities below are defaults; configured overrides are shown with the findings above.

HH2006 - Opaque object schema

Default severity: warning | Category: values | Evidence type: warning

An object permits unspecified entries without named fields, patterned fields or a typed map-value schema.

Suggested action: Describe fields with properties, patternProperties or typed additionalProperties.
Ignore

[HH2006](#) for intentional free-form configuration; tests still sample those values.
