Overview

Findings by chart

Testing time by chart

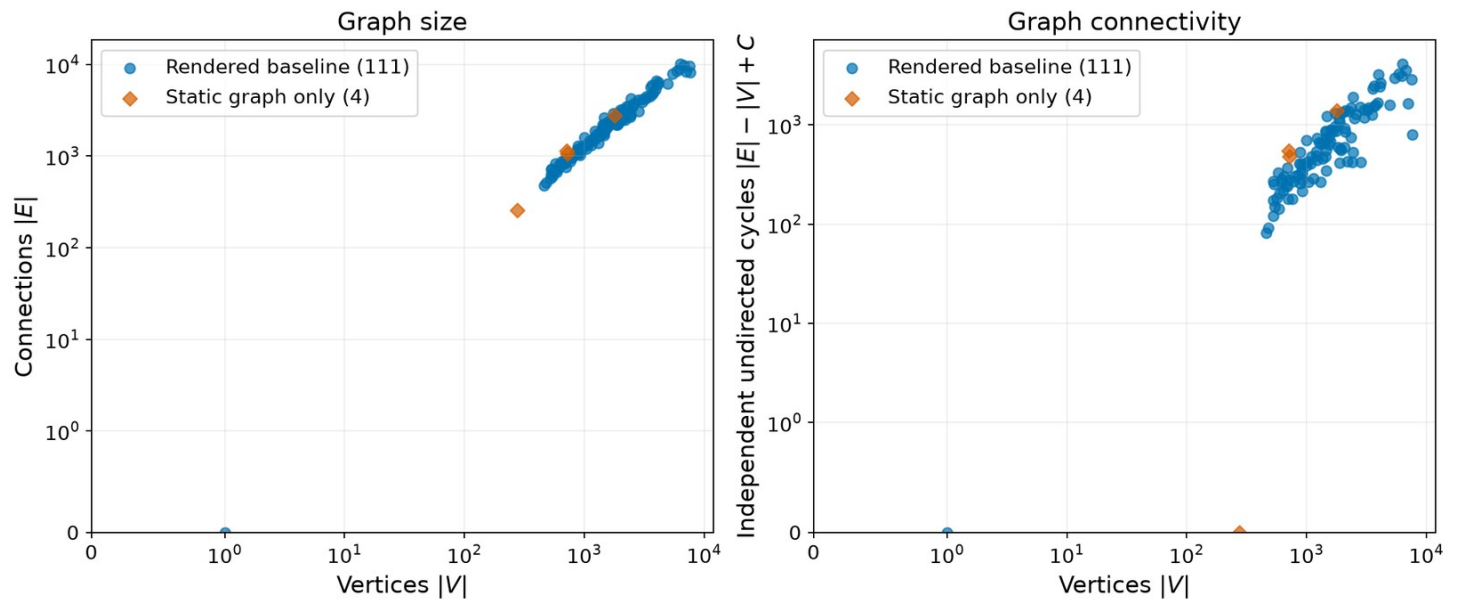

Read left to right, then down. Cell numbers match the chart sections; -- means timing unavailable.

Each cell is one chart; both grids follow chart-section order. Click a cell in the PDF for details. Colors show the highest observed finding kind, not a security or business-impact score. Hatching marks unfinished or unavailable testing, even when a finding was recorded. No findings means none in the completed sample, not exhaustive coverage. Testing time excludes dependency preparation. Plot guide: [Overview matrices](#).

Graph structure

Compiler graph structure: 115 of 115 report charts
Each point is one chart in this report

[Published compiler graph invariants](#)

Published graph measurements are available for 115 of 115 report charts. Vertices represent inputs, conditions, templates and manifest fields; edges connect them. The right panel counts independent loops after ignoring edge direction; C is the number of disconnected groups. Parallel edges count separately. These are structural measurements from the published chart diagrams, not bug counts. Plot guide: [Graph structure metrics](#).

Scan summary

Git comparison unavailable; no charts skipped using previous test results.

Directory: /Users/emmad Doyle/projects/personal/hypothesis-helm/third_party/bitnami-charts

Started (Unix epoch): 1790039844

Started (UTC): 2026-09-22T01:17:24.000+00:00

Finished (UTC): 2026-09-22T03:55:21.600+00:00

Run fingerprint (SHA-256): b00a713d4f1271b6a08ecb68952fc23253daf7344f5ac0c4e4ed86ab175cca77

Versions: Hypothesis not recorded; hypothesis-helm not recorded

Elapsed (wall clock): 9418.10 seconds

Chart testing: 8615.48 seconds

Dependency preparation: 790.53 seconds (excluded from testing budgets)

Charts discovered: 115

Scan status: completed

Discovery complete: True

Unstarted charts: 0

Results record outcomes for the tested sample and selected checks.

Baseline-only, skipped, blocked, and incomplete charts retain their respective statuses.

Status counts

93 time-limit; 18 failed; 1 skipped-library; 3 error.

Settings

Filtering: True | Seed: 0 | Traversal: random

Chart timeout: 60.0 seconds | Workers: 6

Complete settings are retained in the JSON report.

Scan command: Not recorded for this run

Generated values use the configured input domains and any supported destination constraints.

Coverage excludes inputs outside these domains; supplied defaults are tested unchanged. The JSON report records constraints and unresolved mappings.

Disabled checks: [HH2006](#)

Errors

34 distinct diagnostics across 39 occurrences; 5 repeats grouped.

Diagnostics and their triggering inputs are grouped under each chart below.

Up to two examples per diagnostic and six fields per example are shown. Long values and diagnostics are shortened.

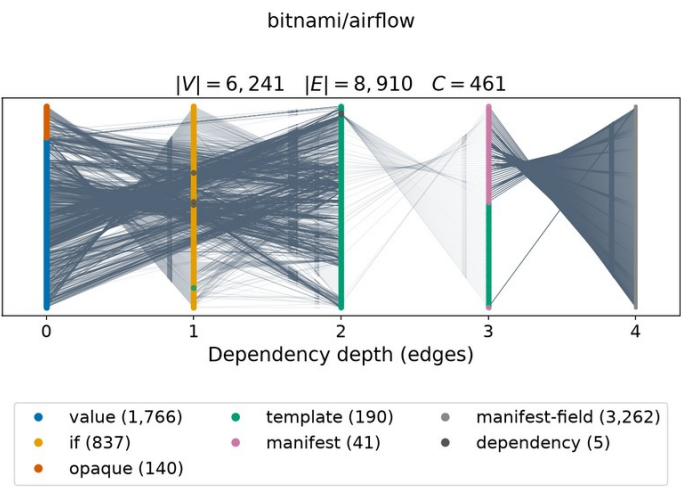

Full inputs, diagnostics, and remaining cases are retained in local run data.

Selected fields identify the inputs varied by the test. Causal attribution requires further investigation.

Charts

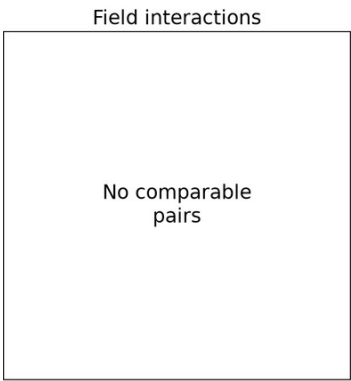

[bitnami/airflow](#)

All vertices and connections are retained.
Connections indicate potential influence, not proven causality.

[Topology: bitnami/airflow](#)

- 239 additional audit findings in JSON.

E015 ([HH1101](#))

Invalid YAML in rendered output (manifest / violation). Severity: error. Inspect the failing YAML and template interpolation, including quoting and indentation.

```
[Diagnostic shortened; full text in artifacts] ... ity': None, 'podAntiAffinity':
{'preferredDuringSchedulingIgnoredDuringExecution':
[{'podAffinityTerm': {'labelSelector': {'matchLabels': {'app.kubernetes.io/instance': 'hypothesis',
'app.kubernetes.io/name': 'apache'}}},
'topologyKey': 'kubernetes.io/hostname', 'weight': 1}}], 'nodeAffinity': None}) in "<unicode
string>", line 265, column 7: affinity: ^
(line: 265) To suppress this check see: https://yaml.dev/doc/ruamel.yaml/api/#Duplicate_keys
```

Phase:

```
$.extraPodSpec.affinity.nodeAffinity.preferredDuringSchedulingIgnoredDuringExecution[*].preference |
Status: failed
```

Changed overrides (used together):

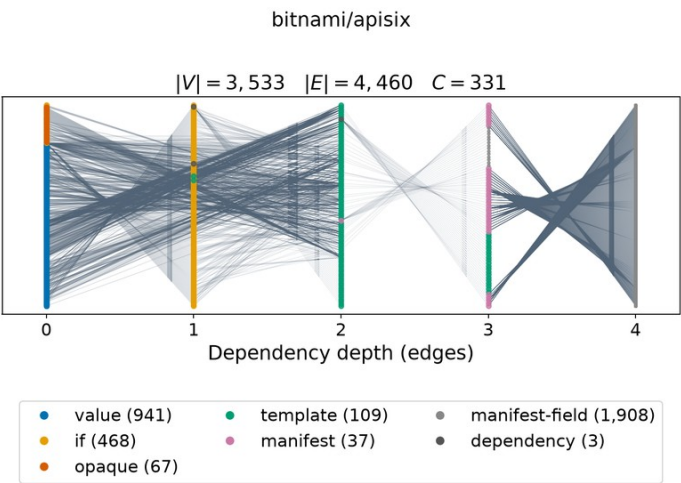

```
- $.extraPodSpec.affinity.nodeAffinity.preferredDuringSchedulingIgnoredDuringExecution.__hypothesis__
key__.preference = {}
```

Absent from overrides: `$.extraPodSpec.affinity.nodeAffinity.preferredDuringSchedulingIgnoredDuringExecution["*"].preference`. Defaults may still apply.

Renderer random inputs (replay tape in artifacts):

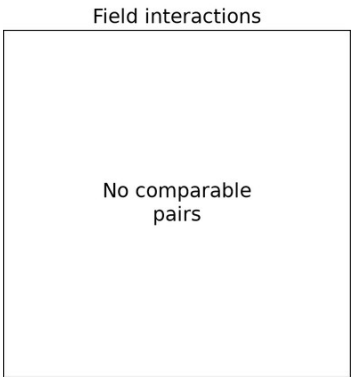

[bitnami/apisix](#)

All vertices and connections are retained.
Connections indicate potential influence, not proven causality.

Appendix: plot guide

Overview matrices

Each numbered cell links to one chart. The left matrix shows findings or test status; the right shows recorded testing time. A dash means no timing was recorded. Incomplete and untested charts have not passed.

Chart topology

Vertices represent values paths, branch conditions, templates and manifest fields. Connections show the relationships the compiler could establish between them. Rendered fields, when available, describe the measured baseline. An absent connection does not prove independence when analysis is incomplete.

Field interactions

Both axes use the field numbers in the chart's sensitivity appendix entry, linked from its plot caption. Each measured cell compares changing two fields together with changing each separately from the same baseline. Manifests are encoded as path-and-value indicators, including empty containers. The color measures the sum of absolute differences in $f(ij) - f(i) - f(j) + f(0)$. A larger value means a stronger interaction for those particular changes; zero means no interaction was measured. Blank cells are unmeasured, not zero. These measurements describe sampled changes, not all possible field values or bug counts.

Graph structure metrics

Each point represents one chart with published graph measurements. The left panel compares vertices with connections. The right counts independent loops after ignoring connection direction: connections minus vertices plus disconnected groups. Parallel connections count separately. The axes compress large values while retaining zero. These counts describe graph structure, not execution loops, runtime or the number of defects.

Appendix: sensitivity field keys

Both heatmap axes use the same field numbers for each chart.

Appendix: finding codes

HH codes identify finding categories. Numbered E entries, when present, identify recorded diagnostics.

Severities below are defaults; configured overrides are shown with the findings above.

HH1101 - Invalid YAML in rendered output

Default severity: error | Category: manifest | Evidence type: violation

The YAML parser rejects rendered output, or Helm reports a YAML parse error.

Suggested action: Inspect the failing YAML and template interpolation, including quoting and indentation.

HH1105 - Missing resource name

Default severity: error | Category: manifest | Evidence type: violation

The resource fails the tool's nonempty metadata.name contract.

Suggested action: Provide a name in each resource branch; ignore this check if your workflow intentionally uses generated names.

HH1107 - Empty resource bundle

Default severity: error | Category: manifest | Evidence type: violation

The active test requires resources but this configuration renders none.

Suggested action: Check resource activation; ignore this contract if an empty chart is intentional.

HH1108 - Kubernetes schema validation failed

Default severity: error | Category: manifest | Evidence type: violation

The configured Kubernetes validator rejects the output.

Suggested action: Use the validator's field path and expected type to check the template and input schema.

HH1109 - Invalid manifest field type

Default severity: error | Category: manifest | Evidence type: violation

Helm parses the YAML but cannot decode a field into its required manifest type.

Suggested action: Check the field named in Helm's decoding error and constrain its values to the required type.

HH2001 - Undocumented values path

Default severity: warning | Category: values | Evidence type: warning

The audit finds a values path with no matching schema declaration.

Suggested action: Document the path in values.schema.json, including its accepted values.

HH2002 - Unspecified values type

Default severity: warning | Category: values | Evidence type: warning

A schema path declares no type, enum or const.

Suggested action: Declare the accepted type or a finite set of values.

HH2003 - Missing values description

Default severity: info | Category: values | Evidence type: warning

A typed schema path has no description.

Suggested action: Describe the field's behavior and any requirements shared with other fields.

HH2004 - No supplied default for a values path

Default severity: warning | Category: values | Evidence type: warning

A discovered path is absent from the original values file.

Suggested action: Supply a default or document when users must provide the field. Render the relevant configurations to check its requirements.

HH2006 - Opaque object schema

Default severity: warning | Category: values | Evidence type: warning

An object permits unspecified entries without named fields, patterned fields or a typed map-value schema.

Suggested action: Describe fields with properties, patternProperties or typed additionalProperties. Ignore [HH2006](#) for intentional free-form configuration; tests still sample those values.

HH3001 - Template accesses a missing object

Default severity: error | Category: template | Evidence type: violation

Helm reports a nil pointer while evaluating a template field.

Suggested action: Guard or default the parent object, or require it in the values schema.
